EDUCATION

Sai Gon University (SGU)

Engineer of Information Technology

2022 – Present

Ho Chi Minh City, VN

Relevant Coursework

Object-Oriented Programming (Java), Data Structures & Algorithms, Software Quality Assurance, Human-Computer Interaction, Database Management Systems, Web Development

SKILLS

Languages: Java (Strong), Python, JavaScript/TypeScript, SQL, HTML/CSS

Frameworks: Spring Boot 3.2.x (Security, Data JPA), React.js, Android SDK

Tools & Cloud: Git/GitHub, Docker, RabbitMQ, MySQL, Postman, VNPAY, Cloudinary API

PROJECTS

Cinema-Booking-System | *Java Spring Boot, MySQL, RabbitMQ, Git*

April 2026

- Developed a scalable cinema management system with real-time seat reservation capabilities.
- Implemented asynchronous invoice generation using RabbitMQ to decouple services and improve system stability.
- Designed a custom sequence generator for unique ID management across tours, guides, and invoices.

DailySelfie Mobile App | *Android SDK, Java, SQLite, Android Studio*

Dec. 2025

- Built an Android application for daily image tracking, implementing efficient local storage using SQLite.
- Optimized bitmap handling and memory management to ensure smooth scrolling in image-heavy galleries.
- Implemented with Google Cloud API to upload images to Google Drive.

Organic Agriculture E-commerce | *React, HCI Principles, Node.js, Figma*

May 2026

- Designing a user-centric marketplace applying Gestalt principles (Law of Proximity) to minimize cognitive load.
- Developing a stateless backend architecture with programmatic dependency injection in Java/Spring.
- Executing empathy mapping and customer journey analysis to optimize the user flow for agricultural buyers.

EXPERIENCE & INTERESTS

Full-Stack Engineering Study

2022 – Present

- Deep-diving into microservices, stateless system design, and programmatic dependency injection.
- Exploring Software Quality Assurance through Cypress and automated testing frameworks.
